

Houston, Texas (July 13, 2017) – SSCS Global IT Services (SSCS) is pleased to announce that it just celebrated its 29th year in business, providing data center hardware support and maintenance to a growing – and now global – client base.

Gahlen Carpenter and William "Howie" Olund founded SSCS in 1988 under the name Solid Systems CAD Services. At the time, computer aided design (CAD) was a thriving part of enterprise IT and Carpenter and Olund set their sights on the Intergraph platform as a market that would be receptive to third party maintenance practices. From this technology platform, they orchestrated expansion into virtually all major (OEM) manufacturers' equipment.

"Gahlen and I are proud of our company and its achievements, but we are even more proud of the people who work so hard to make us great," stated Howie Olund. "It is the commitment of each employee which is an amazing testament to our longevity and global successes."

Gahlen Carpenter added, "It has been the efforts of both individuals and our technical teams that contribute to the service quality our clients appreciate most. I am deeply honored by the unrelenting efforts of each SSCS employee."

On Friday, July 7th, the Houston HQ team held an outdoor barbecue with cake, games, laughs and numerous stories shared from the "old days."

About SSCS Global IT Services

Founded in 1988, SSCS Global IT Services is a pure-play, third-party maintainer headquartered in Houston, Texas, providing support to 65 countries. The company was founded with the philosophy that it will provide a more cost-effective and customized service than can the bureaucracy of an original equipment manufacturer (OEM). From its Houston origin and humble beginnings, SSCS has grown into a multi-national company providing coverage to the United States, Brazil, Canada, Mexico, Great Britain, Europe, Latin America, APAC, and parts of Africa.
